- Perfect fitment and easy installation
- 100% carbon fibre prepreg
- Cured in mould and autoclave
- Exclusive and numbered piece

Fitment:

- BMW E46 COUPE

CSL Style Trunk for BMW E46 coupe, replica of original.

It is a piece made 100% in carbon fibre prepreg and cured in autoclave. The exterior finish comes primed and ready-to-paint, even we offer the possibility of visible carbon fibre finish 2x2 weave and UV varnished.

The exterior side respects the original shape of the CSL trunk, while inner side has been modified to make it more appealing to eye, thus installation could be done with or without interior trim panel.

Inner finish is mate varnished. It has also a hole so if you want to install an ///M logotype (not included) and add a distinctive and sportive touch to the piece

Manufacturing with prepreg carbon fibre and curing in autoclave allows us to control the exact amount of material needed in the different areas of the part, reinforcing with additive layers only in the necessary points. With a weight of only 5.5 kilos, we managed to reduce by 50% the weight of the original boot lid which is about 11.5 kgs.!

All our pieces are numbered and manufactured in our facilities of Spain following the quality standards that characterize us and under the ISO9001/2015 Quality Management Standard. This guarantees its origin and authenticity.
