Fitment:

- BMW E46

Strut tower bar is one of the most common and effective upgrades in a vehicle. With installation of strut bar bodywork gets structural strength, preventing tower flex and alignment changes during sporty driving.

Improve your BMW with Karbonius strut bar and prepare for people staring! In Karbonius Composites, we have inspired in BMW performance strut bar to create our own strut bar. We have designed a piece extremely strong but light at the same time, what adds not only strength and stability, but also a spectacular eye-catching look.

A strut bar manufactured in prepreg carbon fibre and cured in aluminium mould in autoclave; CNC machined manufactured in 5-axis machine, and nuts made of titanium constitute the complete piece.

Standard finish includes varnish high gloss, titanium nuts and natural aluminium anodized.
